Real Wood Box Beams

Jackel Enterprises manufactures real wood Box Beams. A Box Beam is a hollow timber produced to architectural specifications. Jackel primarily fabricates these beams from a character-grade Douglas Fir, but they can be made from any wood specie, including FSC material. Once installed, a Box Beam looks like a beautiful solid timber.

Jackel's Box Beams are available in a variety of textures and finishes. Jackel manufactures Box Beams as long as 50 feet and as large as 30" x 30". Box Beams are suitable for residential, corporate, or commercial applications. Whether you are an architect, designer, developer, builder, or homeowner, a Jackel Box Beam can be the perfect solution for your timber requirements.
